WEB:
CREATIVE DEV TOOLS

ATLS 4519-010/011

SPRING 2019
TUESDAY/THURSDAY 3:30 - 5:20PM
ATLAS 104

http://www.evolutionoftheweb.com/
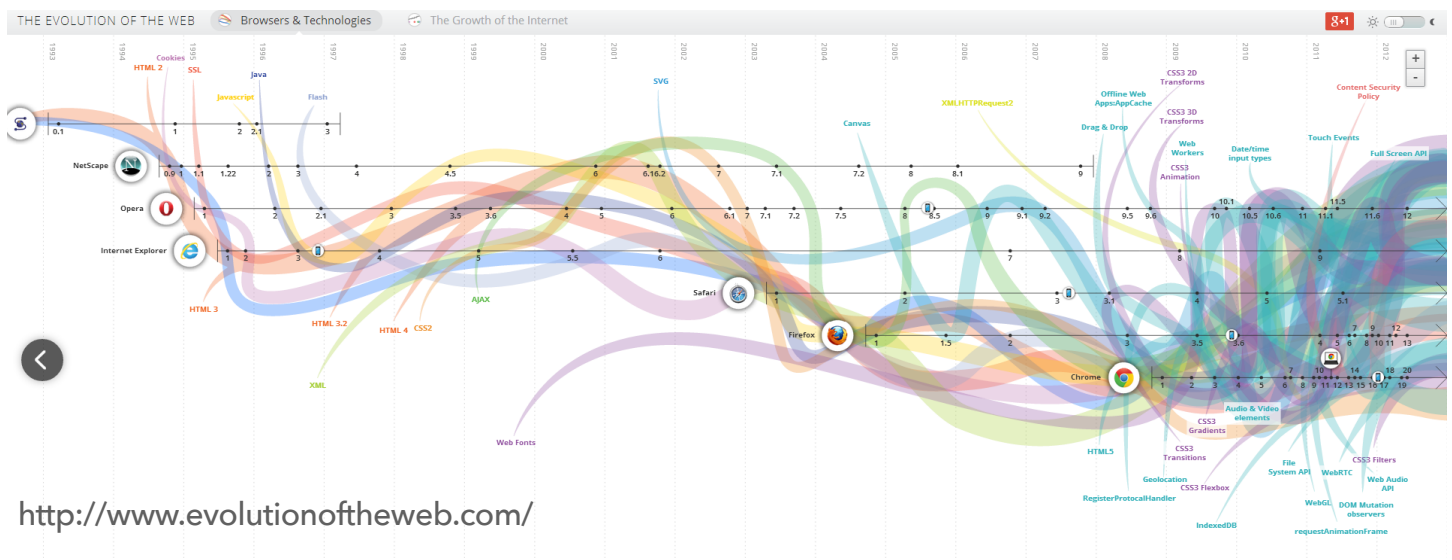

This course takes a deeper dive into web development tools and technologies. Students will learn to design and develop creative web projects and advance their understanding of front-end web technologies. The class employs industry-standard advanced web practices to build portfolio-quality creative projects. Using the command line to access advanced open-source developer programs and libraries students gain real world experience with versioning, preprocessors, and frameworks to employ a modern workflow to web development. Students will create engaging interactive storytelling experiences using parallax scrolling, collaborative coding, and other web-based narrative tools. The class is an experimental sandbox that will play with (and inevitably break) bleeding-edge web technologies.
